GAME OVERVIEW

Crooked Whiskers is a 2D co-op puzzle-platformer where two cats explore a cat food factory. The players have to work together and use their unique abilities to progress through the factory and reach the vault.

GAME DETAILS

Genre: 2D puzzle-platformer
Players: 2 (local co-op)
Platform: PC
Perspective: Side-view

CORE LOOP

1. Explore
2. Solve puzzles
3. Collect cat food
4. Reach food bowls

DESIGN PILLARS

Cooperation
Problem solving
Experimentation

CONTROLS

Player 1: WASD
Player 2: Arrow keys

MVP SCOPE

The minimum viable product has two playable cats and one complete level.

STORY

Two cats find themselves in a large cat food factory. Their goal is to reach the food vault in the middle of the factory. To get there, they must work together to find their way through different sections of the factory, while collecting treats and food cans along the way.

CHARACTERS

Small cat - an adorable tabby cat, who can fit through narrow passages and reach high platforms

Big cat - a chunky tuxedo cat, who can step on pressure plates and push heavy objects out of the way.

GAMEPLAY

The game is played locally by two players using one keyboard. Each player controls one cat independently.

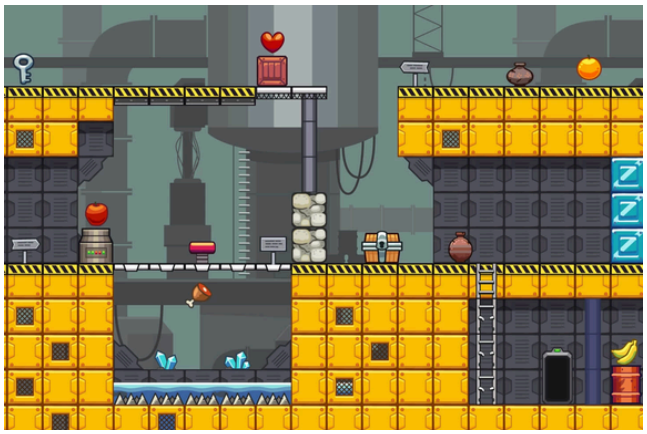

Players explore factory environments, jump across platforms, interact with objects and solve puzzles. The cats must use their individual abilities to help each other progress.
Each level contains three cat food cans. Once all three are collected, the cats must reach their food bowls to progress to the next level.

ART STYLE

The game will feature a colourful 2D pixel art style inspired by games such as Stardew Valley and Terraria. The perspective will be side-view with foreground and a background.

The factory environment will combine classic industrial elements such as yellow and black hazard tape, metal platforms and pipes. The background colour palette will include muted teals and greys while the foreground has brighter colours to make it easier to distinguish interactive elements and collectibles.

The two cats will have different colours and sizes.

MUSIC/SOUND

The soundtrack will have suspenseful music, to give more of an impression of the cats sneaking through the factory. The soundtrack might include machinery sounds to add to the atmosphere.

Sound effects will provide feedback to the players and might include the following:

- Meowing when food cans are collected
- Sound effects for moving obstacles
- Sound effect when stepping on a button or pressure plate
