**Health bar**

- States: full, partially filled, empty
- Content: the health bar updates, when player takes damage or heals
- No mouse: health bar is a visual element, so it does not need keyboard input
- Actions: the bar changes, when the player health changes
- Zero, maximum: empty when zero, health cannot go below zero, full bar at maximum health, player health can not exceed maximum health
- Teaching new players: the bar has text next to it that shows HP: amount/max health

**Hot bar**

- States: hotbar has slots, slots can be selected or unselected
- No mouse: the slots can be selected with number keys, the selected slot has focus state
- Actions: selected slot is highlighted
- Save and load: in a complete game, the hotbar should survive a save and load, having the same configuration after loading the game as it did when saving,
- Teaching new players: each slot has a small number in its corner, corresponding to keyboard numbers

**Dialogue box**

- States: dialogue box can be visible or hidden, if visible, it displays text
- Content: the game puts the text in the dialogue box, the player can move forward to next message, when they have read the first one, after the text ends, the player input closes the dialogue box
- Actions: the text changes or the box closes, if text ran out
- Longest string: long dialogue should be in multiple rows, screen or window size should change the amount of rows the text is in
- Teaching new players: when a dialogue box appears a button should be in the bottom that says continue
